

DEHUMIDIFICATION FOR PRESERVING AND PROTECTING YOUR VALUABLES

Dantherm[®]
CONTROL YOUR CLIMATE

SIMPLE, ECONOMICAL PRESERVATION AND PROTECTION

Dantherm Air Handling's CDF range of powerful dehumidifiers provides the ideal means of preserving and protecting your valuables from humidity damage. They are equally suitable for humidity control in warehouses, water works and pumping stations where corrosion is a significant problem without a professional dehumidification solution.

Rot, fungus, bacteria and corrosion quickly spread in rooms with periodic temperature fluctuations or open water surfaces. CDF dehumidifiers keep equipment, furnishings and materials intact in a wide variety of buildings such as churches, castles, archives, water works, public indoor swimming pools and holiday cottages. Effective dehumidification also prolongs the life of buildings and provides a healthier indoor climate.

Dry storage of materials

Effective dehumidification provides maximum protection in warehouses where materials such as wood and metals are stored. For example, if the

relative humidity is too high, unprotected metals will corrode. This can, however, be avoided by maintaining the relative humidity at the correct level. The modern design of the CDF dehumidifiers goes well with most rooms. Their functionality, easy operation and appearance also make them ideal for archives, libraries and other storage areas where the appearance of the facilities is almost as important as the preservation and protection of the stored materials.

Economical dehumidification

Dantherm's CDF dehumidifiers are more economical to buy, install and operate than other dehumidifier systems. They use considerably less energy than conventional dehumidification based on heat and ventilation. One of the reasons is that CDF dehumidifiers use the condensation principle to dehumidify and re-circulate room air. Dehumidification based on heat and ventilation is far more expensive, because it heats up the air and then removes it – along with the expensive heat.

CDF 10

CDF 10

CDF 10 with water tank

	Dehumidification capacity at 30°C/80% RH	Air flow	Operating range humidity	Operating range temperature	Height	Width	Depth	Weight
	l/24h	m ³ /h	%RH	°C	mm	mm	mm	kg
CDF 10	10	220	40 – 100	3 – 30	600	535	240	28
CDF 10 with water tank	10	220	40 – 100	3 – 30	833	535	240	34
CDF 35	32	250	40 – 100	3 – 30	800	950	315	60
CDF 45	60	500	40 – 100	3 – 30	800	1260	315	74

A simple solution

The CDF units are easily installed. Connect the power and the drain outlet and they are ready to use. The CDF 10 is also available with a built-in water tank. The dehumidifiers draw in air and cool it to below its dew point. This condenses the air and produces water, which is sent to a drain or a container. The units then heat up the dry air and return it to the room at a slightly higher temperature than when it was drawn into the dehumidifier. This reduces the room's relative humidity. The CDF dehumidifier is automatically regulated by a hygostat to prevent the room from becoming too dry or too damp.

Significant advantages

- Simple and economical to purchase, operate and maintain
- Easily adapted to all dehumidifying needs
- Keeps equipment, furnishings, buildings and materials intact
- Protects against fungal and bacterial attack, rot and corrosion
- Reduces maintenance and repair expenses
- Improves the indoor climate, providing ideal surroundings for equipment, fixtures, people and materials.
- Modern design that goes well with the décor of most rooms

CDF 45

Applications

- Churches
- Archives
- Museums
- Holiday cottages
- Water works
- Pumping stations

ELECTRONICS COOLING

DEHUMIDIFICATION

VENTILATION

MOBILE HEATING AND COOLING

Dantherm is a market-leading supplier of energy-efficient climate control solutions for customers across the globe. Our subsidiaries in Norway, Sweden, Germany, the UK, the US and China and our representative office in Russia unite approx. 600 employees. We operate in the following four main business areas:

Electronics cooling:

Climate control for electronics and battery cooling in radio base stations and other Telecom infrastructure. Telecom customers include network suppliers and network operators.

Dehumidification:

Mobile and stationary dehumidifiers for drying buildings and for use in private pools and wellness centres.

Ventilation:

Large ventilation systems used in swimming pools and buildings such as shopping centres and cinemas requiring frequent air change. The range also includes domestic ventilation products based on high-performance heat exchangers.

Mobile heating and cooling:

Products for heating or cooling of tents and equipment used by the armed forces and aid organisations. The customers are primarily the armed forces in NATO countries as well as tent and container manufacturers.
